

Shreya Sahu

SOFTWARE ENGINEER · FELLOW HUMAN BEING

📞 +44-07423210673 / +91-8827875927 | ✉️ shreya.iitm@gmail.com | 🔗 linkedin.com/in/shreya22

Personal Profile

Software Engineer with a background in STEM, building scalable platforms that quietly do their job for millions of users. I like untangling complex systems, shaping them to last, and working closely with people across disciplines. I'm drawn to depth—in engineering, in ideas, and in understanding how humans interact with technology. Holding UK Indefinite Leave to Remain.

Work Experience

Monzo Bank

London, United Kingdom

Backend Engineer (Tech Lead, Rewards and Salary Growth)

February 2023 - Present

- Tech lead for **Rewards and Salary Growth**, owning technical direction, planning, and delivery across both domains.
- **Led team execution** through weekly/monthly planning and work allocation, balancing platform stability with rapid experimentation and hypothesising.
- Joined Rewards at inception; **scaled it to a low-maintenance platform serving 2M users**, later evolving it into a shared system adopted across multiple teams.
- Led integration with an external rewards provider in under 2 months; now **powers 68% of offers across the platform**.
- **Delivered multiple key initiatives**, including the Cash Incentives experiment (salary switching) end-to-end in under one month; introduced personalisation that increased offer activation by +5% while eliminating recurring engineering effort (from days every two weeks to near-zero) and reducing partnerships overhead.
- Worked **cross-functionally with Product, Design, and Data** to align technical decisions with business outcomes; onboarded and mentored engineers in the Rewards domain, accelerating their understanding of both system architecture and product context.
- **Tech Stack** - GoLang, Kafka and Message Queues, Microservices and Distributed Systems

Twitter

London, United Kingdom

Software Engineer - Backend Engineer in Twitter Recommendations

February 2021 - November 2022

- **System Architecture** — Drove and owned a major architectural refactor, leading the split and development of two core microservices to improve scalability and system boundaries.
- **Performance Optimisation** — Scaled a high-throughput microservice to handle **1B+ queries/sec** with **<30ms p99 latency** through GC tuning, thread management, and batch optimisation.
- **Project Ownership** — Owned the end-to-end delivery of a microservice generating Tweet Recommendation candidates, scaling it to serve **500M+ queries/sec across 10 clusters**; worked closely with client teams to gather requirements, drive technical consensus, and prioritise delivery within a complex distributed architecture.
- **Mentorship** — Early member of the RP London team; supported onboarding of new engineers and **successfully mentored an intern**, enabling them to deliver multiple production projects within a single quarter.
- **Tech Stack** - Scala, Microservices Architecture and Distributed Systems

Amazon

Hyderabad, India

Software Engineer

Aug 2019 - Sept 2020

- Working as a part of Address Intelligence team – The global org which is responsible for maintaining the retail address quality and enabling sharing intelligence to reduce delivery failure
- **Performance Optimisation** - **Slashed Microservice latency by 40%** for global traffic, and further for US by 50%, with minimal to no impact in performance
- **Tech Stack** - Java, Microservices Architecture and Distributed Systems

Scalar Academy (previously InterviewBit)

Remote

Student Mentor

July 2019 - December 2020

- **Mentored over 8 students** of varying experience levels over interview preparation and guiding them thinking through their career and/or landing tech jobs

Microsoft

Hyderabad, India

Software Engineer

July 2018 - July 2019

- Co-Developed a DRI dashboard which presents a condensed view of all failures in real time and would lead to more reliable customer service
- Worked on automating the former manual process of failure analysis as a “Data Failure Notification Tool”, which helped **reduce notification time from 3 hrs to less than 10 mins**
- AI Scrum Master - Successfully developed the **Minimum Viable Product for a 7day Hackathon in 3 days**
- **Tech Stack** - C#

Skills

Programming Scala, Java, C++, Javascript, AWS, SQL and NoSQL databases, API Development, Scalable & Distributed Systems

Education

Indian Institute of Information Technology and Management

Dual BTech and MTech in Information Technology

- Courses in the intersection of Computer Science and Management - 8/10 CGPA aggregate

Gwalior, India
May 2013 - May 2018
